

Hi! Thank you for visiting thehomeschooldaily.com ! So glad you were able to find a school tool you can use. Please feel free to use this activity for your own personal use or if you are the main teacher in a coop setting. I provide this free resource to encourage others to homeschool their own.

If you would like to share the file with others, I ask that you share by sending them a link to my website or to the page that hosts the file. Please do not send them a link directly to just the PDF file (the file you are at now).

You may not sell, copy, or alter my files as your own. You may not host my files on your own website without linking them to thehomeschooldaily.com or giving proper attribution to thehomeschooldaily.com .

May you be blessed on your homeschooling journey.

♥ Marie

Soil Sampler

This is a hands-on activity that can really be transformed into an excellent learning experience. During our studying of the different types of soil and the soil horizon we used this activity sheet as one of our investigative labs. We gathered 5 different soil samples from various places. You may be able to gather a few from your own yard. Try to gather samples that differ in texture and color. Compare your samples. Talk about them. Is the soil red? Black? Sandy? Loamy? Do you think worms would like it? Simply use Elmer's Glue to attach your soil samples to the printed activity sheet on cardstock. It is a little messy, but worthwhile. Happy learning! 😊

Soil Sampler

What is soil?

Soil is the loose upper layer of the Earth's surface where plants grow. Soil is a mix of organic material (decayed plants and animals) and broken bits of rocks and minerals.
