The Solar System

The solar system is one of millions within the Milky Way Galaxy. Our planetary system is named the "solar system" because our Sun is named Sol, after the Latin word for Sun, "solis," and anything related to the Sun we call "solar."

There are 8 planets that orbit the sun along with other satellites including dwarf planets, asteroids, and moons.

Venus

Earth

Mars

Jupiter

Saturn

Uranus

8 Planets

The first four planets, Mercury, Venus, Earth, and Mars are called the inner or terrestrial planets. Terrestrial planets are smaller than the outer planets and have solid surfaces. The four outer planets are Jupiter, Saturn, Uranus, and Neptune. These planets are also called gas giants because of their high hydrogen and helium compositions.
